PROFESSIONAL SUMMARY

B.Tech in AI & Data Science (2026 batch), skilled in building full-stack Java applications with Spring Boot and integrating LLMs via Spring AI for agentic workflows. Strong algorithmic foundation with 600+ DSA problems solved on LeetCode and hands-on experience with REST APIs, MySQL, and Docker-based deployments.

PROJECTS

Cold Email Automation Engine (Java, Spring Boot, JavaMail, Gemini API, Google Cloud Platform)

- Built an autonomous Spring Boot pipeline that polls Google Sheets every 60s, cutting manual outreach by 100% and processing 50+ leads per run.
- Engineered sub-200ms document parsing using Apache PDFBox to extract resume context and inject structured background data into LLM prompts.
- Integrated Google Gemini API to generate tailored HTML cold emails, reducing drafting time from 5 minutes manually to sub-3s per lead.
- Guaranteed 0% duplicate dispatches via an atomic row-locking mechanism (Sending... → Sent) with automated, real-time error logging in Sheets.

NeuraBuild: AI Agent Playground (Java, Spring Boot, Spring AI, OpenAI)

- Built an agentic AI backend using Spring Boot and Spring AI, integrating LLMs (OpenAI/Anthropic/Ollama) with function/tool-calling to let the model invoke real backend logic on demand.
- Developed LLM-callable utility tools — a calculator, live weather lookup, and currency exchange converter — enabling the model to fetch real-time data and perform calculations beyond its native knowledge.
- Designed a custom AI website builder that generates complete multi-file static sites from natural-language prompts, using an autonomous agentic workflow.
- Applied structured-output and prompt-engineering patterns to ensure LLM responses parse reliably into typed Java objects, keeping the tool architecture modular and easy to extend with new agents.

NoFriction: Group Expense Tracker & Settlement Engine (Java, Spring Boot, MySQL, Docker)

- Built a full-stack group expense-tracking app supporting equal, exact, percentage, and share-based bill splitting with BigDecimal-based arithmetic to eliminate rounding errors.
- Designed a debt-simplification algorithm using a greedy, max-heap-based approach to minimize the number of transactions required to settle group balances.
- Developed RESTful APIs with Spring Boot and Spring Data JPA/Hibernate for group management, expense logging, and settlement calculation, backed by a MySQL database.
- Containerized the application with a multi-stage Dockerfile and Docker Compose, and deployed it to Railway; built a custom vanilla JS/HTML/CSS frontend with a receipt-style UI

SKILLS

Languages: Java

Backend & Frameworks: Spring Boot, Spring Data JPA, Spring Security, Hibernate, RESTful APIs

Databases: MySQL

AI/LLM Integration: Spring AI, OpenAI, Anthropic, Ollama, Agentic Workflows, Prompt Engineering

DevOps & Tools: Docker, Git, GitHub, Maven, CI/CD (GitHub Actions), Agile/Scrum, Google Cloud

Frontend: HTML, CSS, JavaScript

ACHIEVEMENTS

- Solved 600+ Data Structures and Algorithms problems on LeetCode, with a max contest rating of 1,641.
- Maintained 125+ days problem-solving streak, with 700+ submissions and 250+ active days in the past year.
- Earned 12 LeetCode badges, including recognition for consistent long-term practice (365 Days Badge).

EDUCATION

Galgotias College of Engineering and Technology

B.Tech - Artificial Intelligence and Data Science - CGPA - 7.04

2022 - 2026

Noida, Uttar Pradesh
