PROJECTS

Enterprise Patient Management System (SpringBoot, PostgreSQL, Kafka, gRPC, Docker, AWS)

- Architected a scalable, event-driven Patient Management System using SpringBoot microservices and Apache Kafka for asynchronous communication.
- Implemented secure cross-service authentication using JWT/Bearer tokens and enforced API security through a centralized Auth Service.
- Optimized inter-service connectivity by integrating both RESTful APIs and high-performance gRPC protocols for efficient data exchange.
- Engineered a production-ready deployment pipeline on AWS, utilizing Spring Cloud Gateway for intelligent request routing and load balancing.

Production-Grade Microservices Salon Booking Platform (SpringBoot, React, Docker, MySQL)

- Engineered a production-ready, distributed microservices ecosystem using Java Spring Boot, optimized for high availability and scalability through Docker containerization and robust service orchestration.
- Developed an end-to-end booking engine featuring secure JWT/OAuth2 authentication (via Keycloak), real-time appointment scheduling, and seamless integration with Stripe payment gateway.
- Implemented an event-driven architecture utilizing RabbitMQ for asynchronous communication, coupled with Spring Cloud Gateway and Netflix Eureka for efficient service discovery and load balancing.
- Built a responsive and dynamic user interface using React.js and Redux Toolkit, ensuring smooth state management and real-time user feedback via WebSockets.

Multi-Tenant SaaS POS Application (SpringBoot, REST APIs, MYSQL, JWT, Cloudinary)

- Architected and developed a scalable, enterprise-grade multi-tenant SaaS POS system designed for retail chains and supermarkets to manage inventory, sales, and complex billing workflows.
- Built a robust backend using Java Spring Boot with MySQL, (RBAC) and JWT authentication to secure multi-user environments (Super Admin, Store Manager, Branch Manager, Cashier).
- Engineered a dynamic frontend with React and Redux Toolkit, featuring real-time dashboard analytics, automated inventory management, and integrated digital receipt generation.
- Implemented comprehensive enterprise features, including multi-payment gateway integration (Stripe/Razorpay).

SKILLS

Languages & Frameworks: Java, JavaScript, Spring Boot, React.js, Redux Toolkit

Architecture & Backend Services: Microservices, Event-Driven Design, RESTful APIs, gRPC, Spring Cloud Gateway, Netflix Eureka, WebSockets

Tools/Developers Software: Visual Studio Code, IntelliJ Idea, Git, Github

Databases & Messaging: PostgreSQL, MySQL, Apache Kafka, RabbitMQ

Cloud & DevOps: AWS (Amazon Web Services), Docker, Containerization, Deployment Pipelines

EDUCATION

Dr APJ Abdul Kalam Technical University

2022 - 2026

B.Tech - Artificial Intelligence and Data Science - CGPA - 7.04

Gautam Budhh Nagar, Uttar Pradesh

St. Mark's Public School

2020-2021

Intermediate - Percentage - 89.60

Agra, Uttar Pradesh

Holy Public School

2018-2019

Matriculation - Percentage - 86.83

Agra, Uttar Pradesh

ACHIEVEMENTS

- Secured Rank 3127 in LeetCode Weekly Contest 470, placing in the top 6% of over 27,000 participants.
- Solved 600+ Data Structures and Algorithms problems across multiple coding platforms with a max contest rating of 1602 on LeetCode.
- Maintaining a continuous 70+ day streak solving the LeetCode Problem of the Day (POTD).
